

Bondhu Foundation along with VNV Advisory Services is planning climate smart rice cultivation in Bangladesh through implementation of Alternate Wetting and Drying Technology in paddy fields that have irrigation facility. The proposed Gold Standard for Global Goals project will engage with the local level and/or other formal groups formed at the local level to support the farmers with necessary water management and agricultural skills, tools and capacity. While doing so, the project envisages to benefit farmers through gain of new technological know-how and opportunities to practice climate friendly agriculture without compromising production.
